

Serving Southwest Florida's Leading Luxury Builders

PRESS RELEASE

MAC Contractors Introduces TUFF-N-DRI® to SWFL

Naples, FL (May 4, 2008) -- MAC Contractors is excited to announce its most recent product development for waterproofing protection of the building envelope. One of the most critical issues facing the builder in Southwest Florida is protecting the building envelope from water intrusion. MAC Contractors has taken the lead in the research and development of improved and cost effectiveness in providing this protection.

TUFF-N-DRI® helps control moisture from three main sources – wall leaks, seepage and interior condensation. This product has been proven through years of use on basement waterproofing since 1983. Some of the potential applications for this waterproofing system include decks, stem walls, crawlspaces, behind stone cladding, brick ledges, and planters.

Reducing as well as controlling moisture in your home can help decrease the presence of mold. Controlling moisture will protect your home's contents, your home owner's health, and provide your clients with the peace of mind they deserve.

As **TUFF-N-DRI®** leads the basement waterproofing industry we here at MAC have challenged the research and development at Tremco to see if the product wasn't being completely utilized. We found the pliability of the product, the amazing hydrostatic head resistance, and the spray application brought endless opportunities here in South West Florida.

Tremco's TUFF-N-DRI® product is the brand name that has been helping to deliver more waterproofing value per gallon!

When it comes time to installing **TUFF-N-DRI®**, the spray application ensures consistent millage and provides a cost effective process. This enables you, the builder to get more for your waterproofing budget.

TUFF-N-DRI® can help reduce the conditions which lead to unhealthy air. So build your new home with confidence from the footings up with the experts at **MAC Contractors**. Call **239-992-0359**.
